The thermoflash is a tool for temperature screening without contact with the person.

**Before using the thermoflash**

- Depending on the thermoflash model, the following settings are required:
  - set technical features;
  - identify part of the face you should point to for temperature screening.
- Make sure that the thermoflash is properly working and correctly set.
- Switch on the thermoflash 15 minutes before using it.
- Make sure the batteries are working

**Temperature Screening**

**Step 1:** Ask the person to lift their hair from the pointed part, remove their hat or glasses, and wipe the sweat from their head

**Step 2:** Point the thermoflash to the part of the face

**Step 3:** Keep the thermoflash 5 cm away from the person

**Step 4:** Take the temperature

**Step 5:** If the temperature is lower than 35°, take it again.

**Temperature higher than or equal to 38 °C = fever**
